NAVIGATOR® AIR TASK SEATING

TASK CHAIR & STOOL

Navigator Air task chairs and stools take comfort to a whole other level by mixing an upholstered cushioned seat with a breathable mesh back.

The contoured frame of the back provides lumbar support, while the open weave of the polyester mesh allows air to circulate more freely for greater thermal comfort.

The Navigator Air seating family does more than incorporate modern materials; it projects a modern aesthetic. Details like the black and grey mesh options and cantilevered fixed arms reinforce the seating's bold geometry and stark color palette.

As important as how the furniture looks, is how it makes you feel. Navigator Air task seating ensures you will always be able to find a comfortable seat effortlessly.

A torsion-bar mechanism gradually increases the resistance as you recline— no tension knob required. The only control below the seat is for the seat height because with Navigator Air, that is only adjustment you need to make.

The fixed arms of the Navigator Air seating lines are cantilevered, seeming to float right where you need them.

As you recline, the torsion-bar back flex mechanism gradually increases resistance over the entire 12° range.

A pneumatic lift cylinder beneath the seat makes it height adjustable, providing a customized fit.

An adjustable foot ring for the stool provides additional security and stability for users.

NAVIGATOR® AIR GUEST SEATING

STACK CHAIRS & NESTING

Navigator Air stack chairs pair the mesh back, upholstered seat, and torsion-bar mechanism of the task seating with stackable 4-leg or sled bases. Chairs with either base can be stacked up to 4-high on the floor or 5-high on a dolly. Bumpers help to shield the upholstery from damage and make stacks more stable in storage.

In addition to fixed cantilever arms, stack chairs can also be specified with a flip-up laminate tablet arm. That arm provides a hinged work area and opens to allow access to the seat. Stack chairs can also be specified without arms.

Like the stack chairs, Navigator Air nesting chairs wrap the Navigator Air experience in a more maneuverable, easier to store package. Unlike the stackers, nesting chairs feature flip-up seats a staggered leg design and double-wheeled casters to achieve those goals.

Nesting chairs are also available with a 4th arm option, a black polypropylene flip-and-fold arm that folds out of the way when the chairs are nested.

Wherever you want to go, the Navigator Air family is ready to take you.

Even with their plush upholstered seats, Navigator Air stack chairs can be safely stacked 4-high on the floor.

Glides on sled-base or 4-leg stack chairs and nesting chairs protect floor surfaces from marring.

A flip-up laminate tablet arm is available on stack and nesting chairs; a poly flip-and-fold tablet arm is only on the nesting chair.

The foundation of the Navigator Air line is its polyester mesh back, available in black or grey.
