NOTES:

1. PLACE A CONTINUOUS PIECE OF WIRE MESH (30" MIN WIDTH BY INLET THROAT LENGTH PLUS 4 FEET) OVER INLET OPENING. EXTEND THE WIRE MESH 2' ACROSS THE INLET TOP.
2. PLACE A PIECE OF APPROVED FILTER FABRIC OF THE SAME DIMENSIONS AS THE WIRE MESH OVER THE WIRE MESH WITH WIRE TIES SPACED EVERY 6" IN ALL DIRECTIONS.
3. HOLD THE WIRE MESH AND FILTER FABRIC IN PLACE BY SANDBAGS OR ALTERNATE WEIGHT.
4. FORM THE WIRE MESH AND FILTER FABRIC TO THE CONCRETE GUTTER AND AGAINST THE FACE OF CURB ON BOTH SIDES OF THE INLET. PLACE SAND BAG OR ALTERNATE WEIGHT OVER THE WIRE MESH AND FILTER FABRIC IN SUCH A MANNER AS TO PREVENT WATER FROM ENTERING THE INLET UNDER OR AROUND THE FILTER FABRIC.
5. ASSURE THAT STORM FLOW DOES NOT BYPASS INLET BY INSTALLING TEMPORARY EARTH OR SANDBAG DIKES DIRECTING FLOW INTO INLET IF NECESSARY.
6. THIS TYPE OF PROTECTION MUST BE INSPECTED FREQUENTLY AND THE FILTER FABRIC REPLACED WHEN CLOGGED WITH SEDIMENT.

1. UNDERCUT/IMPROVEMENT DEPTHS ARE PROVIDED FOR INFORMATION ONLY. ACTUAL UNDERCUT OR IMPROVEMENT REQUIREMENTS WILL DEPEND ON SEASONAL SITE CONDITIONS AND FINAL SITE GRADING.
2. ALL ROADWAY SUBGRADE SHOULD BE EVALUATED BY THE ENGINEER DURING SITE GRADING OPERATIONS. FINAL DETERMINATION ABOUT THE TYPE AND DEPTH OF SUBGRADE IMPROVEMENT SHALL BE MADE BY THE ENGINEER BASED ON FIELD CONDITIONS.
3. BASIS OF ESTIMATE:
   A. 18" SOIL STABILIZATION WAS ASSUMED FOR MINIMAL IMPROVEMENTS.
   B. UNCLASSIFIED EXCAVATION AND COMPACTED EMBANKMENT WAS ASSUMED FOR 2' IMPROVEMENTS. FOR FILL CONDITION AS SHOWN IN THE ABOVE SECTION, NO ADDITIONAL UNCLASSIFIED EXCAVATION AND COMPACTED EMBANKMENT QUANTITIES WERE ESTIMATED.
4. DEPTH ESTIMATED FROM THE BORINGS DRILLED IN JUNE, JULY AND AUGUST 2015. ACTUAL UNSTABLE SOIL ZONE DEPTH MUST BE FIELD VERIFIED.
5. POSITIVE SURFACE DRAINAGE SHOULD BE ESTABLISHED AT THE START OF WORK AND MAINTAINED THROUGHOUT CONSTRUCTION TO PREVENT SURFACE WATER PONDING AND SATURATION OF SUBGRADE SOILS. THIS WORK SHALL BE CONSIDERED SUBSIDIARY TO OTHER PAY ITEMS.
6. USE OF BRIDGING TECHNIQUES AND THICKENED FILL LIFTS SHALL BE SPECIFICALLY APPROVED BY THE ENGINEER.
7. THE TOP 18" OF EMBANKMENT FILL SHALL BE COMPRISED OF LOW-PLASTICITY SOILS WITH A MAXIMUM PLASTICITY INDEX OF 18. THIS WORK SHALL BE CONSIDERED SUBSIDIARY TO PAY ITEM 210 COMPACTED EMBANKMENT.
8. STONE BACKFILL SHALL BE USED IF AND WHERE DIRECTED BY THE ENGINEER. 1-6" MIN. PLATING SHALL BE PLACED ON UPHILL SIDE OF SLOPES WHERE STONE BACKFILL IS USED. PLATING SHALL BE CONSIDERED SUBSIDIARY TO PAY ITEM 210.

GENERAL NOTES:

CONSTRUCTION SPECIFICATIONS: Arkansas State Highway and Transportation Department Standard Specifications for Highway Construction (2014 edition) with applicable Supplemental Specifications and Special Provisions. Section and Subsection refer to the Standard Construction Specifications unless otherwise noted in the Plans.

DESIGN SPECIFICATIONS: AASHTO LRFD Bridge Design Specifications, Fifth Edition (2010) with 2010 interim revisions.

LIVE LOADING: HL-93

All concrete shall be Class S with a minimum 28-day compressive strength of 3,500 psi and shall be poured in the dry. All exposed corners to have ¾" chamfers.

Reinforcing Steel shall be Grade 60 (yield strength = 60,000 psi) conforming to AASHTO M31 or M322, Type A, with mill test reports.

Reinforcing Steel Tolerances: The tolerances for reinforcing steel shall meet those listed in 'Manual of Standard Practice' published by Concrete Reinforcing Steel Institute (CRSI) except that the tolerance for truss bars such as Figure 3 on page 7-4 of the CRSI Manual shall be minus zero to plus 1/2 inch.

Excavation and backfilling shall be in accordance with the requirements of Section 801.

Membrane Waterproofing shall conform to the requirements of Section 815. Membrane Waterproofing shall be Type C and as directed by the Engineer applied to all construction joints in the top slab and the sidewalls of R.C. Box culverts and to the construction joint between wingwalls and R.C. Box culvert walls.

Weep Holes in box culvert walls shall have a maximum horizontal spacing of 10'-0" and shall be spaced to clear all reinforcing steel. The drain opening shall be 4" diameter and shall be placed 12" above the top of the bottom slab.

Weep Holes in wingwalls shall have a maximum horizontal spacing of 10'-0" and shall be spaced to clear all reinforcing steel. There shall be a minimum of two (2) weep holes in each wingwall. The drain opening shall be 4" diameter and shall be placed 12" above the top of the wingwall footing.

The barrel components of the culvert may be constructed using continuous pours. For longer culvert construction, the Contractor may use multiple pours with transverse construction joints spaced a minimum of 50 feet apart unless superseded by stage construction or site constraints as approved by the Engineer. Construction joints between footings and walls shall be made only where shown in the Plans. Joints shall be normal to the centerline of barrel and shall be keyed. Longitudinal reinforcing shall be continuous through joints unless shown otherwise. All longitudinal construction joints shall be submitted to the Engineer for approval.

Membrane Waterproofing, Weep Holes, Geotextile Filter Fabric, and Drainage Fill Material will not be paid for directly but shall be considered subsidiary to Class S Concrete.

When the top slab of the box culvert serves as finished roadway surface, curing and finishing shall be in accordance with subsections 802.17 and 802.20 for bridge roadway surface and a tine finish shall be applied in accordance with subsection 802.19 for Class 5 Tined Bridge Roadway Surface Finish. Curing and finishing shall not be paid for directly, but shall be considered incidental to the item "Class S Concrete-Roadway". Class 1 Protective Surface Treatment shall be applied to the roadway surface and this work shall be paid for under the unit price bid for "Class 1 Protective Surface Treatment".

When precast reinforced concrete box culverts are substituted for cast in place box culverts, they shall be manufactured according to ASTM C 1577 and meet the requirements of Section 607. When the top slab of the box culvert serves as the finished roadway surface, a precast reinforced concrete box culvert substitution is not allowed.

Standard Primary Control Monument - Rebar and CAP - Standard - 5/8"x 24" Rebar with 2"Aluminum CAP stamped: "(include all common information here)" plus other markings indicated in the point description of the individual point. AHTD monuments will be stamped "Arkansas Hwy & Trans Dept" with "PN: ###" & "Job ######". Monuments that are set by Consultants will be stamped "Arkansas Hwy & Trans Dept" with "PN:###", "Job######", & "PS####". The consultant Professional Surveyor in charge will stamp his/her PS license number on the CAP*.

**Standard GPS Control Point Monument - 5/8" x 48" Rebar with 2.5"Aluminum CAP stamped: "(include all common information here)" plus other markings indicated in the point description of the individual point. These monuments will be stamped "Ark. State Hwy Trans. Dept.", "GPS Survey", & "Point No. ######".

SX, SY, SZ – Represents the standard error estimate of the coordinate values of each point at the 67% confidence level (one sigma) based on the least squares analysis of the control network. See the AASHTO SDMS Technical Data Guide data tag definition for SX:, SY:, and SZ: for additional information. These values shall be used when control points are added and the entire network is reprocessed using least square analysis. A value of 0.001 is defined as fixed (no adjustment) in the least square analysis process. A value of 30 is defined as location by handheld GPS device or scaled from USGS Quadmap.

Reference Control points (1500 series) shall be used to re-establish horizontal datum if the primary control has been destroyed. These reference control points shall not be used for vertical control unless the elevation has been established from the project datum with 3-wire level techiniques.

All additional project control shall be occupied, measured, and adjusted with direct survey ties to at least two of the control points listed in the table above. New survey control shall not be independent of the survey control listed above. This includes horizontal coordinates and elevations.

Positional Accuracy:
Horizontal - GPS (1.0 cm± 1PPM) *PN: 100-105*
Horizontal - Primary (2.0cm± 20PPM): *PN:1-99, 140-145, 182, 183*
Horizontal - Secondary (3 cm ± 50PPM):
Vertical - NGS 1st Order (±4mm x Vdist in km)
Vertical - NGS 2nd Order (±6mm x Vdist in km)
Vertical - NGS 3rd Order (±8mm x Vdist in km)

Horizontal Datum: NAD 1983 (1997) State Plane Zone: 0302 - South Zone
The adjustment year is based on metadata in the SDMS Control file
A project CAF of: 0.99993545115 has been used to compute the above coordinates.
The project CAF shall have a minimum precision of 9 digits right of the decimal.
This CAF is intended for use within the project limits only.
Grid Distance = Ground Distance X CAF
If Coordinates are listed as Ground:
To compute Grid Coordinates, multiply the Ground Coordinates by CAF about the origin of X=0 & Y=0
If Coordinates are listed as Grid:
To compute Ground Coordinates, divide the Grid Coordinates by CAF about the origin of X=0 & Y=0

Vertical Datum: NAVD 1988 based NGS BM:
A project Elevation Factor of: 0.9999825747 has been computed and incorporated in the above CAF.
This is based on the average elevation of the project: 364.30 Feet
3-Wire Leveling techniques have been used to establish elevations on
Points: 1-145, 182, 183. 900, 902 -973 from NGS BM: SALISPORT

Basis of Bearing: Grid Bearings based on AHTD GPS points: *100-101*
Convergence Angle is: 0°21'34.80" Left at PN: 102
LT: 34-32-31 N LG: 92-38-33 W
Grid Azimuth = Astronomical Azimuth - Convergence Angle

(2) TRAFFIC SIGNAL NOTES & SUMM. OF QUANT.

STATE OF ARKANSAS
REGISTERED PROFESSIONAL ENGINEER
No. 11404
CHRIS R. SELLERS
2018-10-16

TRAFFIC SIGNAL NOTES

1. ALL ELECTRICAL WORK SHALL BE PERFORMED IN ACCORDANCE WITH THE CURRENT EDITIONS OF THE NFPA 70 (2017) NATIONAL ELECTRICAL CODE, NFPA 101 (CURRENT EDITION) LIFE SAFETY CODE, STATE ELECTRICAL CODE AND LOCAL ELECTRICAL CODE.

2. EXTEND GREEN EQUIPMENT GROUNDING CONDUCTOR (E.G.C.) FROM GROUND BAR AT MAIN BREAKER TO CONTROL PANEL AND TO FIRST POLE. SOLIDLY BOND E.G.C. TO GROUND LUG OF CONTROL CABINET AND TO POLE GROUND. ENSURE THAT ONLY ONE NEUTRAL-TO-GROUND BOND EXISTS IN THE SYSTEM AND THAT IT IS AT THE MAIN BREAKER.

3. ELECTRICAL SERVICE SHALL BE PROVIDED BY THE CITY TO A SERVICE POLE WITH EXTERNAL RAINTIGHT BREAKER (MAIN BREAKER), GALVANIZED STEEL SERVICE RISER, METER LOOP (IF REQUIRED), AND WEATHERHEAD AT A MUTUALLY ACCEPTABLE POINT WITHIN THE RIGHT-OF-WAY. IF THE SERVICE POINT IS OVER 10 FEET FROM THE CONTROLLER, THE CONTRACTOR SHALL PROVIDE AND INSTALL A SEPARATE TWO CIRCUIT EXTERNAL BREAKER (SECONDARY BREAKER) ON OR NEAR THE TRAFFIC SIGNAL CONTROLLER CABINET AND SHALL INSTALL CONDUIT, ELECTRICAL SERVICE WIRE (2c/#6 A.W.G. UF RATED, WITH GROUND TYPICAL), AND PERFORM WIRING TO TAP INTO THE CITY'S MAIN BREAKER AS PART OF THIS CONTRACT. CONDUIT IS PAID FOR AS A SEPARATE ITEM OF THIS CONTRACT. TWO CIRCUIT BREAKERS, CONSIDERED SUBSIDIARY TO THE CONTROL EQUIPMENT, ARE NEEDED WHERE STREET LIGHTING IS INCLUDED. AS PART OF THE SIGNAL INSTALLATION, STREET LIGHTING CIRCUIT (2c/#12 A.W.G. UF RATED, TYPICAL) SHALL BE KEPT FROM THE CIRCUIT SERVING THE TRAFFIC SIGNAL CONTROL EQUIPMENT FROM THE POINT OF TIE-IN AT THE SECONDARY BREAKER PROVIDED BY THE CONTRACTOR.

4. CONTRACTOR SHALL CONNECT A SEPARATE NEUTRAL FOR EACH LOAD SWITCH REPRESENTED ON EACH SIGNAL POLE.

5. TRAFFIC CONTROLLER CABINET AND LAYOUT SHALL BE SUCH THAT IT IS NOT NECESSARY TO SHUT DOWN POWER OR REMOVE LOAD SWITCHES IN ORDER TO EASILY TEST OR MODIFY DETECTOR INPUTS TO THE CONTROLLER.

6. CONTROLLER CABINET SHALL BE WIRED SUCH THAT DURING FLASH OPERATIONS POWER TO THE LOAD SWITCHES CANNOT BACKFEED TO LOAD SWITCH POWER BUSS.

7. ALL PARTS OF THIS INSTALLATION SHALL BE IN ACCORDANCE WITH THE STANDARD SPECIFICATIONS FOR HIGHWAY CONSTRUCTION, STANDARD DRAWINGS AND WITH THE MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES, CURRENT EDITION.

8. CONDUIT INSTALLED UNDER ROADWAY SURFACES SHALL BE INSTALLED BY PUSHING OR BORING METHODS. IF THE ENGINEER DETERMINES THIS IS NOT FEASIBLE, THEN A TRENCHING METHOD AS SHOWN IN THE STANDARD DRAWINGS MAY BE USED.

9. TRAFFIC SIGNAL POLES SHALL BE GALVANIZED. BACKPLATES SHALL BE SUPPLIED FOR ALL SIGNAL HEADS.

10. PAVEMENT MARKINGS SHOWN FOR REFERENCE ONLY. SEE PERMANENT PAVEMENT MARKING DETAILS.

11. FOUNDATION FOR ALL POLES SHALL BE EXTENDED IF NECESSARY TO ACCOMMODATE THE REQUIREMENTS FOR SIGNAL HEAD CLEARANCE ABOVE ROADWAY ONLY AT LOCATIONS WHERE THE GROUND ELEVATION AT THE POLE IS BELOW THE ELEVATION OF THE ROADWAY (SEE NOTES ON STANDARD DRAWINGS). PAYMENT WILL BE INCLUDED IN SECTION 714 TRAFFIC SIGNAL MAST ARM AND POLE WITH FOUNDATION OF THE STANDARD SPECIFICATIONS FOR HIGHWAY CONSTRUCTION, CURRENT EDITION.

12. ALL CONCRETE PULL BOXES SHALL BE (TYPE 2 HD) UNLESS OTHERWISE INDICATED. ALL CONDUIT SHALL BE THREE (3") INCH DIAMETER UNLESS SPECIFIED ON PLANS.

13. CONTRACTOR SHALL NOTIFY ALL EXISTING UTILITY OWNERS BEFORE BEGINNING WORK ON THIS PROJECT.

14. LUMINAIRE ASSEMBLIES SHALL BE OF THE FULL CUTOFF TYPE.

15. HARDWARE INPUTS MAY BE DETERMINED BY SUPPLIER. EACH DETECTOR OUTPUT SHALL INPUT THE CONTROLLER THROUGH A SEPARATE INPUT UNLESS OTHERWISE NOTED AND BE PROGRAMMED TO ACTUATE THE ASSOCIATED PHASE. COMBINATION (COMB.) DETECTORS SHALL ALSO BE PROGRAMMED TO PROVIDE VEHICLE COUNT/OCCUPANCY DATA.

16. TO DETERMINE UTILITY CLEARANCES ABOVE THE TRAFFIC SIGNAL POLE, REFER TO THE POLE SCHEDULE FOR VERTICAL SHAFT HEIGHT. WHERE THE POLE SCHEDULE INDICATES THAT A LUMINAIRE ARM WILL BE USED, THIRTY-EIGHT (38') FEET SHOULD BE USED TO DETERMINE UTILITY CLEARANCE ABOVE THE LUMINAIRE ARM. WHERE THE POLE SCHEDULE INDICATES A TRAFFIC SIGNAL POLE WITHOUT A LUMINAIRE ARM, A HEIGHT OF TWENTY-ONE (21') FEET SHOULD BE USED TO DETERMINE UTILITY CLEARANCE ABOVE THE TRAFFIC SIGNAL MAST ARM. AN ADDITIONAL SIX (6') FEET SHOULD BE USED DIRECTLY ABOVE "VIDEO DETECTOR" AT LOCATIONS SHOWN ON THE SIGNAL PLANS.

17. THE DESIRABLE MINIMUM DISTANCE FROM THE FACE OF THE ROADWAY CURB OR SHOULDER EDGE TO THE FACE OF NON-BREAKAWAY POLE OR OBSTRUCTION IS SIX (6') FEET. REFER TO TRAFFIC SIGNAL PLANS FOR SPECIFIC LOCATION OF POLES, CONTROLLER, AND ANY OTHER NON-BREAKAWAY OBSTRUCTIONS. REFER TO "DESIGN PARAMETERS, MINIMUM CLEAR ZONE DISTANCE" FOR MINIMUM DISTANCE FROM THE EDGE OF TRAVELED WAY TO THE FACE OF A NON-BREAKAWAY POLE OR OBSTRUCTION. TRAFFIC SIGNAL POLES OR ANY OTHER NON-BREAKAWAY OBSTRUCTION SHALL NOT BE INSTALLED WITHIN THE CLEAR ZONE.

18. AS DETERMINED BY THE ENGINEER, FOUNDATION EMBEDMENT MAY BE DECREASED BY A MAXIMUM OF TWO FEET IF COMPETENT ROCK IS ENCOUNTERED PRIOR TO ACHIEVING PLAN EMBEDMENT AND AT LEAST HALF THE REMAINING PLAN EMBEDMENT LENGTH IS KEYED INTO COMPETENT ROCK.

19. CONNECTION OF TRAFFIC SIGNAL DISPLAY TO FIELD WIRING SHALL UTILIZE AN APPROVED TERMINAL STRIP BEHIND HANDHOLE COVER AT BASE OF POLE. TERMINAL STRIP SHALL PROVIDE PROTECTION TO PREVENT EXPOSURE TO THE PUBLIC IN THE EVENT THAT POLE COVER IS MISSING. PAYMENT FOR TERMINAL STRIPS SHALL BE INCLUDED IN ITEM 714-TRAFFIC SIGNAL MAST ARM AND POLE WITH FOUNDATION OF THE STANDARD SPECIFICATION FOR HIGHWAY CONSTRUCTION, CURRENT EDITION.

20. CONTROLLER CABINET LAYOUT AND ORIENTATION SHALL CONFORM TO IMSA STANDARDS.

21. ONE VIDEO PROGRAMMING MODULE SHALL BE PROVIDED FOR AIMING AND SETUP OF DETECTORS IF THE VIDEO SYSTEM CANNOT BE ADJUSTED THROUGH HARDWARE AND SOFTWARE PROVIDED BY ITEMS WITHIN THE JOB.

22. TRAFFIC SIGNAL CONTRACTOR SHALL NOTIFY THE RESIDENT ENGINEER OR ASSIGNED DEPARTMENT PROJECT INSPECTOR EACH DAY PRIOR TO SIGNAL RELATED WORK. NO WORK ON TRAFFIC SIGNALS WILL BE ALLOWED OR APPROVED WITHOUT THIS PRIOR NOTIFICATION.

23. ALL STEEL POLES SHALL BE DESIGNED TO MEET THE AASHTO STANDARD SPECIFICATIONS FOR STRUCTURAL SUPPORTS FOR HIGHWAY SIGNS, LUMINAIRES AND TRAFFIC SIGNALS, 4TH EDITION (2001) WITH 2003 AND 2006 INTERIMS.

24. THE LOCAL RADIO WITH ANTENNA SHALL BE COMPATIBLE WITH THE EXISTING CLOSED LOOP COORDINATION SYSTEM IN THE CITY OF BENTON.

25. TRAFFIC SIGNAL CONTROLLER SHALL BE COMPATIBLE WITH THE CITY OF BENTON EXISTING EAGLE MARC MASTER CLOSED LOOP SYSTEM.

26. DOOR PANEL TEST PUSH BUTTONS SHALL ACTUATE INDICATED PHASES. DETECTOR ASSIGNMENTS AND/OR SIDE PANEL JUMPERS MAY REQUIRE MODIFICATION.

27. ALL SYSTEM DETECTOR RACKS AND ASSOCIATED EQUIPMENT SHALL BE PROTECTED BY THE MAIN CONTROLLER CABINET POWER SURGE PROTECTION.

28. IN PULL BOXES, POLE BASES, JUNCTION BOXES AND CONTROLLER CABINETS, THE DIRECTION OF EACH CABLE RUN SHALL BE INDICATED BY ATTACHING A PERMANENT TAG OF RIGID PLASTIC OR NON-FERROUS METAL TO THE CONDUIT. TAGS SHALL BE EMBOSSED, STAMPED OR ENGRAVED WITH LETTERS 3/4" OR GREATER IN HEIGHT AND SECURED TO THE CONDUIT WITH NYLON OR PLASTIC TIES. IN INSTANCES WHERE THE CONDUIT OR CONDUIT ENTRANCES ARE NOT VISIBLE OR ACCESSIBLE, A DIRECTION TAG SHALL BE ATTACHED TO EACH CABLE.

29. THE CONTRACTOR SHALL PERFORM ALL WORK POSSIBLE THAT WILL MINIMIZE THE TIME THAT THE TRAFFIC SIGNAL IS OUT OF OPERATION. IF, IN THE OPINION OF THE ENGINEER, TRAFFIC CONDITIONS WARRANT THE CONTRACTOR SHALL PROVIDE FLAGMEN TO DIRECT TRAFFIC WHILE THE TRAFFIC SIGNAL IS OUT OF OPERATION.

SHORING: Shoring will be required during construction. See SP Job CA0601 "Shoring". Location and limits of Shoring are approximate and to be determined by the Contractor.

TEMP. MSE WALL: Temp. MSE Walls will be required during construction. See SP Job CA0601 "Temporary Retaining Walls". Location and limits of Temp. MSE Walls are approximate and to be determined by the Contractor.

MAINTENANCE OF TRAFFIC:
Stage construction enumeration shown on bridge detail drawings matches bridge layout stage construction sections. Refer to bridge layout Stage Construction sections for correlation of RDWY. M.O.T. enumeration with bridge stage construction enumeration.

STRUCTURAL STEEL: See each bridge layout for additional bridge specific requirements. Structural steel completely embedded in concrete may be AASHTO M270, Gr.36. See Elastomeric Bearing Details sheets for cleaning requirements of external load plates and shear blocks of bearings.

Unless noted otherwise, all beams and girders shall be blocked in their true position in the shop as specified in Section 807.54(b)(2) of the Standard Specifications.

The Contractor shall submit to the Engineer for informational and record purposes, details of Methods, Equipment, and Falsework construction in accordance with Sections 807.63 & 807.64.

The Contractor shall ensure that girders are stable throughout the erection process. The Contractor shall be responsible for providing temporary bracing or stiffening devices to accommodate handling stresses in individual members or segments of the structure during erection.

The camber, length of sections, distance between bearings, and openings of joints shall be measured with the beams in their true position. This information shall become a part of the permanent records of this job. The component parts shall be match-marked in this assembly and these marks shall be shown on the erection diagram. All beam and girders dimensions are based on a temperature of 60°F. A tolerance of 1/4" +/- is allowed for camber.

Web, flange and flange splice plates for all main members shall be cut and fabricated so that the primary direction of rolling is parallel to the direction of the main tensile and/or compressive stresses.

Drawings show general features of design only. Shop drawings shall be made in accordance with Section 807.04, submitted, and approval secured before fabrication is begun.

Requests for substitution of structural steel shapes shown with shapes of greater size must be submitted by the Contractor to the Engineer for approval. Steels of equal or greater strengths will be accepted only when shown on the approved shop drawings. Shapes and materials shown in the plans will be the basis of payment and no additional compensation will be made for any adjustments due to substitutions.

Diaphragms and cross-frames shall be installed as beams are erected. All bolts in diaphragms, cross-frames, and field splices shall be installed and tightened in accordance with Section 807.71 prior to pouring the concrete deck, unless noted otherwise.

Field connections shall be bolted with high-strength bolts. Bolts shall be 3/4"ø except as noted, and open holes shall be 15/16"ø unless otherwise noted. Holes for 3/4"ø bolts may be 15/16"ø if a washer is supplied for use under both the nut and the head of the bolt. Bolt spacing shall be 2 1/2" for 3/4"ø bolts unless noted otherwise. For field splices, bolts shall be 7/8"ø bolts. Open holes shall be 15/16"ø. Bolt spacing shall be 3" for 7/8"ø bolts unless otherwise noted. Bolts shall be placed with heads on the outside face of the exterior girder web and on the bottom of the girder flanges.

Girder webs may be made by shop splicing with minimum length of 25 feet for section. Flange plates longer than 50 feet may be made by shop splicing with minimum length of 25 feet for section. No additional payment for welds for these splices will be made. Material Specifications and location of shop-welded splices, if any, shall be shown on the shop drawings.

All welding shall conform to Section 807.26.

All welding that is to be done during fabrication of structural steel, including temporary welds, shall be detailed on the shop drawings and submitted to Engineer for approval. If additional welds are required, whether temporary or permanent, a formal request with detailed drawings shall be submitted to the Engineer for approval; however, additional welds used for attaching falsework support device or screed rail supports to the structural steel that do not exceed the limitations of Subsection 802.13 will not require the approval prior to construction.

Groove welds in web and flange plates shall be Quality Control (q.c) tested by nondestructive testing, are required by governing specifications in Subsection 807.23(b). Fillet welds at flange to web plate connections shall be Q.C. tested by the magnetic particle method. All Q.C. testing is at the Contractor's expense.

Anchor bolts shall be galvanized according to Subsection 807.07 and shall be Grade 55.

All stud shear connectors shall be granular flux filled, solid fluxed, or equal and shall be automatically end welded in accordance with recommendations of the manufacturer.

Bearings shall be seated in accordance with Subsection 808.08. The work and materials will not be paid for directly but will be considered subsidiary to the item Elastomeric Bearings.

See Bridge Layouts and detail drawings for additional notes.

CONCRETE:

Concrete for bridge superstructure shall be Class S(AE) with a minimum 28 day compressive strength, f'(c) =4000 psi. Concrete for bridge substructure shall be Class S with a minimum 28 day Compressive strength, f'(c) =3500 psi.

Concrete shall be poured in the dry and all exposed corners shall be chamfered 3/4" unless otherwise noted.

Concrete in bridge superstructure shall be placed, consolidated and screeded off for the entire pour before any concrete has taken its initial set. This may require the use of a retarding agent.

A minimum of 72 hours shall elapse between completion of the deck and the pouring of the parapet railing. Any railing pours made before the entire deck has been placed and cured must be approved by the Engineer.

The superstructure details shown are for use when removable deck forming is used and are the basis for measurement of Class S(AE) concrete. See Standard Drawing No. 55005 for allowable modifications and for tolerances when permanent steel bridge deck forms are used.

The concrete deck shall be given a tine finish in accordance with Subsection 802.19 for Class 5 Tined Bridge Roadway Surface Finish. Movement of the finishing machine across the new concrete shall be on planks placed on the surface and shall be prohibited for 72 hours after finishing the pour. Sufficient concrete must be placed ahead of strike-off to fully load the girder.

Refer to the "EXPANSION DEVICE INSTALLATION AT END BENTS" note, see Std. Dwg. No. 55008. Backfill shall not be placed behind the backwall until the deck concrete on the adjacent span has been placed.

See detail drawings for additional notes.

REINFORCING STEEL:

All reinforcing steel shall conform to AASHTO M31 or M322, Type A, Grade 60.
Mill test reports shall be submitted for reinforcing steel.

The reinforcing steel in bent caps shall be properly placed to avoid interference with anchor bolts or sheet metal sleeves.

The reinforcing steel shall be accurately located in the forms and firmly held in place by steel wire supports sufficient in size and number to prevent displacement during the course of construction. See Section 804.06. The wire supports will not be paid for directly but will be considered subsidiary to the item "Epoxy Coated Reinforcing Steel (Grade 60)" and "Reinforcing Steel Bridge (Grade 60)", in conformance with Section 804.11.

See detail drawings for additional notes.

STEEL PILING:
Piling shall be HP 12x53 (Grade 50) for each End Bent and shall be paid for as "Steel Piling (HP 12x53)". Pile casings are required for all pile within MSE. Casings shall be installed prior to or during the embankment construction and shall extend from top of leveling pad to bottom of cap. Pile casing material shall be of sufficient strength to retain its original form, free from harmful distortions after compaction of the fill material surrounding it. The minimum inside diameter of the casing shall be 18" for HP 12x53. Piles shall be driven through the open casings. After driving is complete, the pile casings shall be filled with Class S Concrete, an approved non-shrink grout, mixture used for Portland Cement Concrete Pavement, or other approved material in a single continuous operation to completely fill voids. Pile casings and concrete will not be paid for directly but shall be considered subsidiary to the item "Steel Piling (HP 12x53)".

DRILLED SHAFTS: Foundations for Intermediate Bents 2-4 shall consist of Drilled Shafts. All Drilled Shafts shall be founded into competent material designated as shale on the boring legend to the minimum rock penetrations and tip elevations shown in the plans. No adjustments in Plan Tip Elevation shall be made without prior approval from the Engineer. Methods of construction of the drilled shafts shall be in accordance with SP CA0601 "Drilled Shaft Foundations". Permanent casing shall be used for construction of the drilled shafts, such as to prevent caving, to exclude groundwater, or to provide shoring, and shall not extend below top of rock. The Contractor must obtain approval from the Engineer for any deviation from this requirement.

Drilled shaft and column dowels reinforcing shall be secured in place before concrete placement. Concrete and reinforcing steel in drilled shafts, including projection of drilled shaft bars into column, will not be paid for directly but will be included in the unit prices of the drilled shaft items.

For construction methods, materials, measurement and payment of drilled shafts, see Job CA0601 Special Provision "Drilled Shaft Foundations".

For additional information, see bridge layout and detail drawings.

CROSSHOLE SONIC LOGGING: Nondestructive testing shall be performed on specific drilled shafts in accordance with SP CA0601 "Nondestructive Testing of Drilled Shafts".

TEXTURED COATING FINISH: Class 3 Textured Coating Finish shall be applied to bridge surfaces as specified in Special Provision Job No. CA0601 "Textured Coating Finish" and in accordance with subsection 802.19(b)(3). Textured Coating Finish shall not be applied on surfaces where Class 1 Protective Surface Treatment is applied.

PAINT: All structural steel except galvanized members and some surfaces in contact with concrete, and as otherwise noted, shall be cleaned in accordance with Section 807.84(b) and painted as specified in Subsection 807.75. Color of paint shall be DARK BROWN and shall match Fed. Std. 595B, Color Chip No. 20108.

EXISTING BRIDGE: Existing Bridge Nos. A3251 and B3251 (log 110.86) are 422' long consisting of six composite W-Beam simple spans supported by substructures consisting of R.C. Int. Bents with multi-columns on spread footings and Pile End Bents. The existing bridges are located in approximately the same location as the proposed bridge. Plans can be obtained upon request from the Construction Contract Procurement Section of the Program Management Division.

REMOVAL AND SALVAGE: Existing Bridge Nos. A&B3251 shall be removed in accordance with Section 205. Removal of Bridge No. B3251 will be required for Stage 2 Construction. Removal of Bridge No. A3251 will be required after WB I-30 traffic has been moved to new bridge. All material from the existing bridge shall become the property of the Contractor.

STRUCTURAL STEEL: Structural steel shall be AASHTO M270, Gr.50 unless otherwise noted and shall be paid for as "Structural Steel in Plate Girder Spans (M270, Gr.50)".

BORING LEGEND:
