## Evaluation Plan

There are three primary methods for evaluation during the delivery of this course.

1. Instructors will conduct learning assessment throughout the course delivery through checks for learning and understanding, discussion questions, and opportunities for feedback.
2. Students will demonstrate their proficiency in applying knowledge and/or skills learned by completing a multiple-choice test. A proficiency of 75 percent is required to pass this course. There will also be an opportunity for individual evaluation during the course activities and exercises to determine whether individual students demonstrate proficiency in the required functions.
3. Course providers will use an evaluation form to document participant feedback on overall quality of content, instruction, and facilities. The evaluation uses a 1–5 rating system, with five being the highest. At the conclusion of the course, the course provider will collect the evaluations and return them to the course manager for review.
